WEBSITE REGISTRATION TEST CASES

1. Verify that the registration page loads correctly.
2. Verify that all mandatory fields (e.g., Name, Email, Password) are present.
3. Verify that the user can enter valid details and submit the form successfully.
4. Verify that an error message is displayed if a required field is left empty.
5. Verify that email validation works correctly (e.g., invalid formats are rejected).
6. Verify that the password meets security requirements (e.g., minimum length, special characters).
7. Verify that password and confirm password fields must match.
8. Verify that existing email addresses cannot be used for registration.
9. Verify that CAPTCHA (if present) must be solved before form submission.
10. Verify that successful registration redirects the user to a confirmation page or login page.
11. Verify that a confirmation email is sent after successful registration.
12. Verify that clicking the confirmation link in the email activates the account.
13. Verify that terms and conditions must be accepted before registration.
14. Verify that registration fails if invalid data is entered.
15. Verify that the form resets when the reset button is clicked.
16. Verify that error messages are displayed in a user-friendly manner.
17. Verify that special characters are handled properly in name fields.
18. Verify that mobile number validation works correctly (if applicable).
19. Verify that the page works across different browsers (Chrome, Firefox, Safari, etc.).
20. Verify that the page is responsive and works on mobile devices.
